Trans. of Tsvetnye Metally (USSR) 1959, v. 32, no. 9,
p. 63-66.

A description is presented of the ITV-275 roll temperature measuring device that was developed by the "Tsvetmetavtomatiki" Design Bureau. The operation of the device is based on the measurement of the temperature of a small constant volume of air, which is in a direct contact with the surface of the roll. The air temperature is measured with a special miniature semiconductor thermal resistor which has a high temperature coefficient of electrical resistivity (about 3% per °C).
